Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

void Factor(int num) {
    int count = 0;
    int i;

    for (i = 1; count++, i <= num; ++i) {
        count++;
        if (num % i == 0) {
            count++;
        }
    }

    printf("%d\n", count);
}

int main() {
    int n;

    scanf("%d", &n);
    Factor(n);

    return 0;
}
```
